At the rate PBW is going it will be early 2018 at a minimum before any constructive activity is completed to close at the site. The monitor wells were installed in January this year and we all know that the groundwater in Southeast corner of the site is impacted as a result of the property located to the east (SKA's Current groundwater report) and based on SKA's report it is more than likely the residential property located to the south is impacted. PBW is doing exactly what I thought they would do, milk the shit out of the project until someone puts a foot on their head. When groundwater wells are installed/sampled/analyzed on adjacent property to the south PBW will be required to monitor them for four (4) quarters which does not include delineation. What a bag of worms.
